

# Setting timers for your electric blinds

HILLARYS

You'll love what we do

- 1 Navigate to the 'Timed Programming' screen as shown.
- 2 To edit / add timers select the location in the centre of the screen.
- 3 To add timers select the + button. To edit a timer that already exists, select the pencil button.
- 4 Enter the information as required:
  - Start by giving your timer a name. For example, "Morning" or "Night".
  - Next select a time for the blind to operate. You will notice you have three options:
    1. AT – this will allow you to set a specific time to operate your blind.
    2. Sunrise – Use this option if you wish to have the blind operate at sunrise.
    3. Sunset – Use this option if you wish to have the blind operate at sunset.

- 5 Enter the information as required:
 

**Note:** If using the Sunrise/Sunset options there is a slider below each option. This allows for an offset to be enabled. For example, selecting Sunrise and setting the offset to +20 minutes will operate the blind at 20 minutes after sunrise.

  - Select the days you wish the timer to operate.
  - Once complete press "OK" (top right-hand corner).
  - Select the blinds you wish to operate at the time set in the previous step.
  - Once you've selected a blind the blind control screen will load. Select the appropriate operation (e.g. close) and once complete, click "OK".

**Note:** You will need to repeat this process for all the blinds you wish to operate at the desired time.

- 6 Once you have selected all blinds you wish to be operated select "OK". The timer is now set.
